

Assignment 4: Write a SELECT query to retrieve all columns from a 'customers' table, and modify it to return only the customer's name and email address for customers in a specific city.

SQL Command:

create table customer

(

id number (10) primary key,

name varchar2(20),

email address varchar2(20),

location varchar2(20)

);

insert into customer values(5, 'ee', 'ee@gmail.com', 'KA');

select * from customer;

select name, location

from customer

where location='TN';
